Subcapsular hemorrhage of the liver after laparoscopic cholecystectomy, a case report
After undergoing laparoscopic cholecystectomy, a 44 year old woman complained of a dull pain, that turned out to be caused by liver subcapsular hemorrhage, which was a very unusual complication.

Hyoid bone release and end-to-end anastomosis on stenosis of the trachea
Combination of hyoid bone release and end-to-end anastomosis with insertion of T-tube has been proven efficacious in preventing the reoccurrence of tracheal stenosis.

Case report. Bilateral recurrent pneumothorax: a rare complication of miliary tuberculosis
This case report highlights the extreme rarity of bilateral recurrent pneumothorax complicating miliary tuberculosis.

Three-Dimensional (3-D) video imaging as a tool in pre-operative evaluation of head and neck tumors
Three-Dimensional (3-D) video imaging gives exact condition of any abnormality in head and neck. This 3-D video imaging gives more information, documentation and ability to the surgeon to handle the abnormality.

Evaluation of oxidative stress in diabetics with vascular complications.

ERRATA FOR MED J INDONES VOL. 8 NO. 2, 1999
We apologize for some disturbing errors in some parts of the data presentations which remained during technical editing due to time constraints. Please, notice the following corrections or clarifications:

1. Page 78, Table 1:
   1.1. the data figures under STAGING for BATCH 2 of the case group were misplaced under the control group for BATCH 1 study.
   1.2. Row “Stage II”, column “n”, written as 45 should read 46.

2. Page 92, Table 2: The data should be replaced by the following figures:
   Stage I = 14 cases (4.7%), Stage II = 6 cases (15.3%), Stage III-A = 68 cases (23.7%),
   Stage III-B = 116 cases (38.7%) and Stage IV = 56 cases (18.6%).

3. Page 125, Table 3: Two cases with "Unknown" Stage were already classified and should be included in Stage IV to make up 29 cases (12.7%).
